

MAYANK NAGAR

DevSecOps Engineer Intern

mayankn645@gmail.com | github.com/Mayank-nag | linkedin.com/in/mayank-nag | Jaipur, India

PROFILE SUMMARY

Computer Science undergraduate with hands-on experience in Python, Linux systems, and cybersecurity tooling (Kali Linux, Nmap, Burp Suite, Wireshark). Developed projects spanning web applications, machine learning pipelines, and secure execution environments. Familiar with CI/CD concepts, shell scripting, and secure coding practices. Seeking to contribute to DevSecOps workflows involving automated security testing, infrastructure hardening, and vulnerability management.

EDUCATION

B.Tech — Computer Science Engineering
Jaipur National University, Jaipur

2024 — Present

TECHNICAL SKILLS

Security & DevSecOps: Kali Linux, Nmap, Burp Suite, Wireshark, OWASP Top 10, Secure Coding, Sandboxing
Programming: Python, C, C++, Bash
Web Development: HTML, CSS, JavaScript, React, Next.js, Vite
Machine Learning: TensorFlow, OpenCV, Pandas, Matplotlib
Mobile Development: Flutter, React Native, Dart, Android, API Integration
Systems & DevOps: Linux, Ubuntu, Bash, Terminal, Shell Scripting, Git, GitHub
Databases: MySQL, Firebase

PROJECTS

Developer Portfolio Website [\[Portfolio\]](#)

[Vite](#) · [JavaScript](#) · [Anime.js](#) · [CSS](#)

Modern personal portfolio built with modular component architecture, animations, and theme switching.

- Architected modular JavaScript component system using Vite for fast build performance
- Implemented smooth scroll-reveal animations using Anime.js and persistent dark/light theme toggle

Ensured cross-device responsive layout and fast page load times

Women Safety App

[Dart](#) · [Flutter](#) · [JavaScript](#)

Mobile-first safety application with emergency alert and live location sharing capabilities.

- Developed one-tap SOS emergency alert system with browser geolocation API integration.

Integrated real-time location sharing and navigation features

Secure Execution Environment

[Python](#) · [Linux](#) · [Cybersecurity](#)

Cybersecurity-focused project exploring sandboxing, access control, and secure code execution on Linux.

- Implemented sandboxed code execution environment restricting unauthorized system access
- Explored Linux-based containment techniques relevant to DevSecOps pipelines

Mango AI Classification (CNN)

[Python](#) · [TensorFlow](#) · [OpenCV](#)

Deep learning system for classifying mango varieties from images using convolutional neural networks.

- Built end-to-end CNN image classification pipeline using TensorFlow and OpenCV
- Evaluated model with precision/recall metrics achieving reasonable accuracy on test dataset

Game Development with PyGame

[Python](#) · [PyGame](#)

Interactive games implementing real-time physics, collision detection, and event-driven architecture.

- Implemented real-time physics simulation and collision detection in Python
- Designed event-driven game loop architecture with score tracking and difficulty progression
